

MODRÉVA

Website Usability Evaluation Report

Institution: UCSD UX Design Certificate

Date: March 2026

Prototype: v.2 Figma MID-FI

Methodology: Remote Moderated

ABOUT MODRÉVA

Project Overview & Purpose of This Report

MODRÉVA is an affordable men's and women's luxury watch brand, designed and built as a brand website prototype for this course. The prototype evaluated in this study covers the full shopping journey, from a first-time brand impression all the way through order confirmation.

The MODRÉVA prototype was developed in Figma across eight screens: a homepage, men's and women's collection pages, individual product detail views, a shopping cart, a three-step checkout sequence (address, shipping, payment), an order confirmation screen, a product reviews page (extra), and an invoice page.

Watches are positioned as “Affordable Luxury” below \$1k, with shipping options ranging from standard UPS/USPS Surepost to FedEx 2-Day delivery.

The goal of this usability evaluation was to determine how clearly the prototype communicates the MODRÉVA brand, how intuitively users can complete a purchase, and where friction exists in the current design. Findings from this study will directly inform the next iteration of the prototype.

EVALUATION FRAMEWORK

This evaluation follows the **DECIDE** framework, which is a six-step checklist that covers the conceptual, practical, and ethical issues involved in planning and conducting a usability study. Each step is designed to make sure nothing important gets skipped, from defining what the study is trying to find out all the way through to how the MODRÉVA website research results are interpreted and shared.

RESEARCH PLAN

8 ▶ Prototype Screens Evaluated

5 ▶ Test Participants

4 ▶ Scenario-Based Tasks

6 ▶ Post-Task Questions

METHOD

Guided screen-share sessions where participants shared their screen and described out loud what they were seeing and thinking as they went.

Remote Moderated testing via Zoom with 5 participant using the “Think-Aloud” protocol for all users.

Session length:

30–40 minutes per participant.

Participants:

5 adults who have made at least one online purchase (*above +\$100*) in the past six months. Recruited from personal and professional network, with a mix of ages and comfort levels with online shopping. The recruitment bar was kept intentionally low. The goal is to observe real people using the design, not to find specialists.

Task	Description
1. First Look	5-second brand recall.
2. Discovery	Navigating to Men's collection.
3. Selection	Viewing details and adding to cart.
4. Conversion	Checkout sequence navigation.

SESSION SCHEDULE

All sessions were conducted remotely via Zoom screen share within a single week. Scheduling was arranged around each participant's availability, with evening and weekend slots offered for those unavailable during business hours.

MARCH 2–7, 2026 · FIVE PARTICIPANTS · ONE WEEK

PARTICIPANT	DATE	DAY	TIME	DEVICE	DURATION
Doug Y	March 2, 2026	Monday	6:30 PM	Laptop (Windows)	38 min
Sam Y	March 3, 2026	Tuesday	7:00 PM	MacBook	29 min
Jenya M	March 4, 2026	Wednesday	6:30 PM	iPhone (mobile)	42 min
Melissa I	March 6, 2026	Friday	2:00 PM	iPad	33 min
Mark M	March 7, 2026	Saturday	1:30 PM	Desktop (Windows)	35 min

*Age Range: 35 - 70

RESEARCH OBJECTIVES

Objective A:

Does the homepage immediately communicate brand positioning and category?

Objective B:

Assess navigation ease between watch collections and product selection.

Objective C:

Identify conversion obstacles in the checkout flow.

Exploratory Questions

Does the homepage communicate what MODRÉVA sells and who it is for, without requiring you to scroll or navigate?

Can users find and reach a specific product category (men's or women's) from the homepage without confusion?

Do the product detail pages provide enough information for you to feel confident adding a watch to their cart?

Is the three-step checkout flow (address entry, shipping selection, payment) legible and logical at each step?

Does the zip code entry for shipping cost calculation read as helpful, or does it introduce unnecessary friction?

MODRÉVA

Website Usability Evaluation Report

FINDINGS

IMPRESSION & DISCOVERY

Task 1: Brand Impression

Success Rate 100%

Users immediately perceived MODRÉVA as luxury. Visual communicated high value for all participants.

Task 2: Navigation

Success Rate 90%

Average of 12 seconds to find the target collection. The site's Information Architecture (IA) is clear and logical.

Task 3: Product Detail

Success Rate 86%

Sam's session was consistently slower across every task, but most noticeably during product browsing where she searched for a sizing guide.

"I have a thin wrist, I'm not sure if this fits." - Sam Y.

Task 4: Checkout

Success Rate 70%

Drop-off at the shipping step due to "zip code walls" before price transparency. Number of participants who paused significantly, asked an unprompted question, or expressed confusion at each checkout screen. The shipping and payment screens tied as the highest-friction moments in the session.

RATING SCALE & TASK COMPLETION RESULTS

4.0

AVG. NAVIGATION
EASE (OUT OF 5)

3.4

AVG. CHECKOUT
CONFIDENCE (OUT
OF 5)

4.2

AVG. BRAND TRUST
(OUT OF 5)

96%

TASK COMPLETION
RATE

Rating Scale Scores by Participant

All three rating questions per participant (Navigation Ease, Checkout Confidence, and Brand Trust) scored on a 1 to 5 scale. Checkout Confidence shows the widest spread and the lowest overall scores, reflecting the friction observed during the shipping and payment steps.

TIME ON TASK

Approximate time each participant spent on each task, based on session time-stamps. The checkout task accounts for the largest share of session time across all participants. Sam's session was consistently slower across every task, most noticeably during product browsing where she searched for a sizing guide and during checkout.

NAVIGATION CONFUSION BY SCREEN

Number of participants who lost their bearings, needed extra time to orient, or made an unexpected choice at each screen. A score of 0 means all five participants moved through that screen without any hesitation. The product details page and both checkout screens (shipping and payment) are the obvious areas for improvement in the next iteration.

UX OBSERVATIONS CONFIRMED

HOMEPAGE IMPRESSION

01

Brand Positioning Read Clearly Within Seconds

One participant asked immediately whether the prices would be out of reach, which suggests the premium positioning lands strongly, and a small price callout in the hero could turn that hesitation into a reason to keep site visitors browsing.

02

PRODUCT NAVIGATION

Category Labels Were Intuitive; Model Numbers Created Pause

03

CHECKOUT — SHIPPING STEP

Zip Code Entry for Cost Calculation Caused the Most Hesitation

04

PRODUCT DETAIL — SIZING

No Sizing Reference Left Two Participants Unable to Confirm Fit

Participant Quotes

//

I don't see anything here that tells me it's secure. On Amazon there's usually a lock.

DOUG Y · PAYMENT SCREEN

//

I bought a watch online before and I remember there was a size guide... like a diagram you could print out and hold against your wrist to check the fit. I don't see anything like that here.

MELISSA I · PRODUCT DETAIL PAGE

//

If I bought this as a gift I'd have no idea how to describe what I ordered. EX-1801 sounds like an invoice number.

JENYA M & SAM Y · PRODUCT DETAIL

RECOMMENDATIONS

w/PRIORITY LEVELS

Based on observed patterns across all of the UX test sessions, the following changes are recommended for the next prototype iteration. Priority is based on how many participants ran into the same issue and how much it affected their ability to get through the flow.

HIGH PRIORITY

Shipping Page

Revise the Shipping Step to Show Options Before Zip Code

The current pattern requires users to enter their zip code before shipping options appear. This created the most hesitation of anyscreen. Showing the two available options (UPS/USPS, FedEx 2-Day) with estimated cost ranges upfront, with zip code entry triggering the exact calculation rather than gatekeeping the options entirely can solve this issue.

HIGH PRIORITY

Product Detail Pages

Add a Sizing Guide or Wrist Fit Reference to the Product

Two participants independently raised the absence of sizing context. Jenya noted she would have searched for it elsewhere, and Melissa specifically recalled a printable wrist sizing diagram from a previous watch purchase and looked for something similar on MODRÉVA.

HIGH PRIORITY

Product Detail Pages

Add a Descriptive Product Name Alongside the ModelNumber

Several participants paused at “Model No. EX-1801” on the product detail page, reading it as an ID rather than a product identity. Adding a short descriptive name (e.g., “The Executive” or “Men's Executive 38mm”) above the model number would give buyers a more immediate brand/product connection.

MEDIUM PRIORITY

Homepage

Add a Price Anchor or “Starting at” Callout to the Homepage Hero

One participant immediately asked about pricing after viewing the homepage, indicating the visual luxury positioning created a perception that prices might be out of reach. A subtle “Starting at \$125” callout in the hero area could address this before users navigate away.

LOW PRIORITY

Payment Screen

Include a Security Indicator at the Payment Entry Step

Multiple participants commented on the absence of a lock icon or SSL indicator (badge) near the credit card fields on the payment screen. This is a low-effort addition to the prototype that addresses a recurring trust concern, especially relevant for an unknown brand asking users to enter credit card information for the first time.

MODRÉVA

UX Testing Results

DESIGN IMPROVEMENTS

HOMEPAGE IMPRESSION

Brand Positioning Improved

A price callout was added to the hero section after one participant immediately questioned whether the prices might be out of reach, reinforcing the premium positioning while helping reduce hesitation and encouraging visitors to continue browsing.

BEFORE

AFTER

PRODUCT NAVIGATION

Model Names Improved

Model numbers were replaced with clear product names after users paused when encountering product numbers like “Model No. EX-1801”. Test participants noted they would not know how to describe the product if purchasing it as a gift.

BEFORE

AFTER

CHECKOUT - SHIPPING STEP

Shipping Cost Calculation Improved

The checkout shipping step was simplified after users hesitated when asked to enter a zip code to calculate costs; the update removes the zip code field and instead shows the shipping cost in the final (confirmation screen) total based on the delivery address.

MODRÉVA

Website Usability Evaluation Report

APPENDIX

A - PARTICIPANT CONSENT FORM

Informed Consent to Participate in a Usability Study

PURPOSE OF THE STUDY

You are being invited to participate in a usability study for the MODRÉVA website prototype, a luxury watch e-commerce experience built in Figma. The purpose of this study is to observe how people interact with the site and identify areas where the design can be improved. This is a class project conducted as part of the UCSD Extension UX Design Certificate program.

WHAT TO EXPECT

The session will take approximately 30 to 40 minutes and will be conducted remotely via Zoom. You will be asked to share your screen and walk through a few simple tasks on the prototype while thinking out loud. There are no right or wrong answers. The goal is to understand your experience, not to test your abilities.

YOUR RIGHTS AS A PARTICIPANT

You may stop the session at any time without consequence.

You will be informed of the purpose of the study before it begins.

Your personal information will not be collected or stored.

You will be identified by first name only in all notes and findings.

Session recording requires your explicit verbal and written consent.

Findings are used for academic purposes only and will not be shared commercially.

SESSION RECORDING

This session may be recorded for review purposes only. Recording will not begin without your explicit consent. If you prefer not to be recorded, you may still fully participate in the study.

☐ I consent to being recorded ☐ I do not consent to being recorded

AGREEMENT & SIGNATURES

By signing below, you confirm that you have read and understood this consent form, your questions have been answered, and you agree to participate voluntarily in this usability study.
